

# EQUINIX AND ACCRETS

## Assured Peace of Mind with Fully Managed Private Cloud Infrastructure and Connectivity

Enterprises today face the challenge of staying on top of the constantly changing cloud technology landscape with limited resources, while still taking advantage of what cloud has to offer. When embracing cloud services, a lean in-house IT team—with insufficient capability and bandwidth to manage mission-critical IT resources—is a key challenge.

With many carriers owning data centers, enterprises are constrained when colocating with these data centers due to limited choice of carriers and service providers. However, these enterprises often find themselves at the mercy of these data centers, which result with inconvenient and more costly connectivity, bandwidth and peering options due to vendor lock-in and other business constraints.

### Joint solution

To solve these common constraints, Equinix and Accrets International (Accrets) have partnered to offer a joint solution that combines carrier-neutral Equinix International Business Exchange™ (IBX®) data centers with Accrets Managed Private Cloud Solution. The solution creates a digital transformation that drives the distribution of services and controls closer to customers, employees, partners and ecosystems—at the digital edge.

Accrets Managed Private Cloud Solution is a fully managed, hosted private cloud solution aimed at delivering service assurance and peace of mind. As an end-to-end cloud services offering, it encompasses Infrastructure as a Service (IaaS), network connectivity and data center hosting on Platform Equinix® to speed up private and hybrid cloud deployments.

Armed with an experienced team of cloud consultants and technical experts, Accrets offers extensive enterprise experience and deep expertise to manage IT functions and deploy end-to-end private and hybrid cloud solutions. With capabilities to customize network infrastructure specific to customer requirements, Accrets ensures seamless integration of network connections between private and public cloud environments and provides services to escort customers to data centers for compliance audits.

With Platform Equinix, the solution offers:

- Resiliency and uptime essential to mission-critical requirements.
- Carrier-neutral data centers with industry-leading dense connections to international telecom carriers, network service providers and public cloud providers such as Microsoft Azure, Oracle cloud and Amazon Web Services (AWS).
- Largest industry ecosystems to reach everywhere, interconnect everyone and integrate everything.
- Ability to leverage Equinix Cloud Exchange Fabric™ (ECX Fabric™) to dynamically connect distributed infrastructure across 30+ locations around the globe, supporting enterprises with regional deployments.

Together, Accrets and Equinix offer flexibility and scalability for enterprise cloud deployments with cost-efficient interconnectivity, speeding up future-ready IT infrastructures while shortening time to market. These joint capabilities empower faster private cloud deployments to meet complex requirements for mission-critical environments with rigorous deployment timelines.

### Joint capabilities

#### Managed IT services

Expert team with deep cloud and hosting knowledge to plan, migrate, execute and manage private cloud. Accrets is armed with extensive domain experience, having managed complex Enterprise Resource Planning (ERP) deployments for industries such as mission-critical financial and manufacturing environments.

#### SAP certification

Accrets is the only Singapore business to achieve SAP hosting services certification.

#### Industry-leading partnerships

Including Activants, Aryaka, ETact, Nutanix and Oracle for client-specific solutions.

## Solution benefits

### Enhance flexibility and scalability.

Benefit from the Accrets Managed Private Cloud Solution being hosted at Equinix. With the industry's largest ecosystems, Equinix offers connectivity options to international telecommunication and service providers and delivers carrier diversity and accessibility to diverse cloud and network service providers. By leveraging the Equinix ecosystem, Accrets enables customers to connect their regional and international branches within the same data center. Placing data nodes at the network edge empowers future scalability with easy reach to digital ecosystem across multiple metros.

### Gain cost efficiency.

Enjoy superior interconnection that optimizes connectivity costs for greater cost efficiency. Gain further savings with Accrets, which offers fixed bandwidth charges—unlike public cloud service providers. By eliminating separate charges for data upload and download, you will avoid bill shock.

### Achieve faster setup of future-ready capabilities.

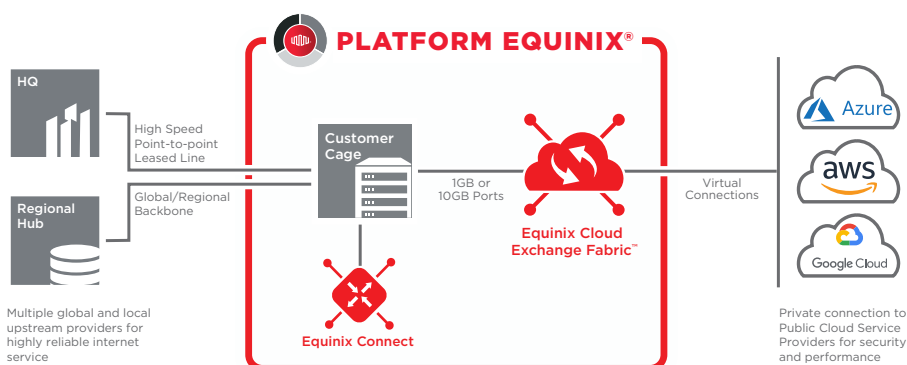

Gain the convenience of being in the same data center with other network and cloud services providers. This helps speed up building future-ready capabilities, allowing Accrets to easily tap on other providers for their complementary solutions—such as Cybersecurity Protection Services and Content Delivery Network (CDN)—to deliver a comprehensive end-to-end cloud solution for enterprises.

### Speed up time to market with faster deployments.

Benefit from faster and easier connectivity, speeding up deployments and cutting time to market. With Accrets' private cloud hosted in Equinix, you gain reliability, consistency of support and service availability in a mission-critical environment.

### Facilitate compliance audits.

Leverage Accrets' partnership with Equinix to facilitate compliance audits, with Accrets escorting customers on-site to Equinix's IBX data centers where their applications are hosted on Accrets' private cloud. This is especially critical when enabling mission-critical environments, such as Financial Services Industries (FSIs), to meet their compliance requirements.

## Use cases

Accrets demonstrates deep expertise in handling complex deployments for mission-critical environments with stringent requirements including the need to:

- Operate business in different locations across varied countries.
- Host critical applications, such as ERP, in a centralized data center, with non-critical applications, such as email/productivity apps, hosted at the edge to get closer to users/branch offices.

Accrets leverages Platform Equinix to host critical applications at Equinix, assuring secure and dynamic connections for distributed infrastructure and digital ecosystems via ECX Fabric—flexible, on-demand, global interconnection.

## About Equinix

Equinix connects the world's leading businesses to their customers, employees and partners inside the most-interconnected data centers. In 52 markets across five continents, Equinix is where companies come together to realize new opportunities and accelerate their business, IT and cloud strategies. We operate the only global interconnection platform, sparking new opportunities that are only possible when companies come together.

## About Accrets International

Accrets International provides private hybrid cloud computing solutions and IT managed services. It designs and implements complete cloud solutions for your business, ensuring a smooth business operation. Accrets's solutions reduce the cost of IT operations and free you to focus on your core business. With round-the-clock monitoring and support, you can sleep well and leave your IT to Accrets.
