ACCRETS MANAGED BACKUP SERVICES

Your business data is the most valuable asset residing on your IT systems.

How do you recover your data should it ever get compromised or lost ?

Do you have a solution to protect your business against disaster affecting your IT systems and ensure business continuity?

An important protection strategy is to ensure you have backup copies of your data that can be quickly restored for business operations to resume smoothly.

Is your business subjected to regulatory requirements dictating that your business archive data for specific durations ? How do you stay compliant ?

Does your organization have people with the skills of managing and monitoring data backup/restorations ?
